OZONE REPLACEMENT PARTS AND MAINTENANCE

A Chemical-Free Solution for Water Treatment

> Ozone can be used as an effective method for water treatment: It is a powerful oxidizing agent that can reduce organic and inorganic contaminants from water.

TOP 4 BENEFITS TO USING OZONE IN WATER TREATMENT

> Oxidation: Ozone acts as a strong oxidant, meaning it reacts with various contaminants in water. It can break down complex organic molecules, eliminate odors, and reduce bacteria, viruses, and other microorganisms.

> Disinfection: Ozone is a highly effective disinfectant, even more potent than chlorine. It can quickly reduce bacteria, viruses, and parasites present in water, reducing the risk of waterborne diseases.

> Organic Compound Removal: Ozone can effectively reduce organic compounds such as pesticides, herbicides, pharmaceuticals, and industrial chemicals from water. It breaks down these compounds into simple, less harmful substances.

> Taste And Odor Control: Ozone treatment can significantly improve the taste and odor of water by oxidizing compounds responsible for unpleasant tastes and smells.

> Ozone For The Reduction Of: Iron, Iron Related Bacteria, Magnesium, Manganese, H₂S and Unwanted odors - rotten egg smell, stale and musty water.

> Sizes Available: 10x54 12x52 13x54 and 14x65

> Media Per Tank: 1.0cf 1.5cf 2.0cf and 2.5cf

> Medias Used: CAT-HAC Carbon, Centaur Carbon, Coconut Shell Carbon, Greensand Plus, Katalox.

Optional Accessories & Plumbing Adapters
